

ApexCCTV Announces Free Public CCTV Training Videos

ApexCCTV has created a large free body of CCTV and Surveillance Training Videos for use by those in the industry. These videos are available immediately at the company's home page, and are available to the public at no charge.

Allen, Texas (PRWEB) October 30, 2009 -- ApexCCTV Has launched a page on its website containing free CCTV and surveillance related press releases. These videos cover a broad range of topics related to the industry, and are intended to help ApexCCTV's customers and partners with various installation, sales, marketing, and product selection tasks.

ApexCCTV's [video tutorials](#) provide real value to anyone in the CCTV or Surveillance industry by covering in depth how to accomplish some of the more daunting tasks faced by their customers and business partners. These videos can be broken into several categories:

Product Specific Videos – These videos are specific to individual products in the CCTV industry, and include advanced topics on installation and configuration of these products. GeoVision and VivoTek products are covered in depth, for example, as are many others.

General Installation Videos – These videos cover topics that are regularly encountered on job sites. Selected topics include things like crimping connectors properly, selecting materials, penetrating building surfaces, camera and housing installation, making proper cable connections, determining video frame rates, proper selection and use of power supplies, as well as many others.

Networking Videos – These videos handle the trickier networking related topics facing more and more CCTV installers and business owners as the lines continue to blur between CCTV and information technology. These videos cover the networking gamut, including basic network configuration, dealing with router's, IP addressing, DHCP servers, avoiding conflicts with your customers existing NAT settings, DNS and dynamic DNS configuration, and many other topics. These topics all address networking best practices and pitfalls to look out for.

ApexCCTV has also made a public commitment to continue producing these videos and making them available to the industry at no charge whatsoever. There is even a link on the videos page that allows individuals to request a video tutorial covering a topic of their choice, and many such videos have already been produced.

About ApexCCTV:

ApexCCTV is a distributor and installer of fine security camera systems, surveillance digital video recorder systems, general surveillance equipment, and all related accessories.
