

The picture you see is an example of a denture made with Keystone Industries Diamond D Heat Cured Acrylic. This particular photo illustrates why the **Chroma Essence** shade of Diamond D is ideal for characterized dentures. For those laboratories not color characterizing dentures, Diamond D is also available in the most popular "industry standard" shades.

Those shades are **Original, Light** and **Light Reddish Pink**.

As we were developing **Diamond D**, we worked closely with a laboratory that desired a shade to closely match **Candolor aka Swiss**

shade 34, **Chroma Essence** is the result. The **Chroma Essence** shade is unique in that it is a micro-fibered acrylic that possesses a higher than average opacity. These are desirable traits if color characterization of the base is performed. It has a soft salmon shade in its uncharacterized state, which many find is also suitable, straight out of the container.

***No breakage, No Popp-Offs and Extraordinary Fit-That's the Diamond D Denture.***

Diamond D in any shade continues to earn testimony from its users in regard to its superior fracture resistance, tooth adhesion, packing characteristics, flow, and overall finish.

We are proud to include the following testimonials to substantiate our claims.

*"I was extremely impressed with the color /shade and tissue match of the Diamond D Chroma Essence shade. It is a salmon color outside the mouth, but intraorally, it is the closest match to natural tissue, I have found"* **Patrick Strong DD FCAD, Strong Denture and Anti-Snoring Clinics**

*"I am very impressed with Diamond D acrylic in regard to improved fit over other heat cure acrylics I have used. You have gained a new customer."* **Alexander Hupka, Denturist**

*"Diamond D Denture Acrylic surpasses any other acrylic I have used in strength, and bond to acrylic teeth."* **Colin Lang, Denture Dept. Manager, Balmoral Dental Designs**

*"Not only is Diamond D strong and looks great, it has working characteristics that are better than the competing brands of denture acrylics, we have used."* **Frank LaClair, LaClair Dental Laboratory**

*"I offer a lifetime warranty against breakage on our premium SuperNatural Dentures. I can offer this with confidence knowing that I use Diamond D Heat Cure Denture Acrylic to fabricate them."*

**Mark Jackson, Vice President, Precision Dental Ceramics**

*"During my recent CDT exam Diamond D proved to be virtually unbreakable."* **Peter Bonalewicz, CDT, Kastle Prosthetic Service Inc.**

*"I have been using Diamond D Heat Cure Acrylic for 6 months and I am very pleased with it. It has been exceptional with no breakage or teeth coming off."* *"No other quality high impact acrylic has done that for me in the past 30 years of use."* **Giselle Johnstone, Johnstone Dental Productions**

***Diamond D Ultra Impact Denture Acrylic is manufactured and sold through Keystone Industries and is available through an extensive worldwide dental dealer network. See our new Dark Veined Shade.***
